

IRSA Wood - Refresher

Anti-grey product for wood - to clean and refresh greyed wood outside for a long-term brightening of the wood colour

Characteristics

IRSA Wood-Refresher is a special liquid cleaning product to refresh and clean greying wood in outdoor areas. The natural colour tone of the greyed wood is restored, the fresh warm colour tone is renewed and remains lastingly visible after being treated with the coloured IRSA Oils suitable for outside; IRSA (Exotic) Wood Oil or IRSA Oil - Resin - Impregnator offer enduring protection and the original colour of the wood, which is visible once again, is sustained.

Application

According to the degree of greying IRSA Wood-Refresher is used either pure or diluted with water (up to 1:5). The wood to be treated should be dry, frost free and have been made wet. IRSA Wood-Refresher is applied to the wet surface and using a hard coarse scrubbing brush it is brushed into the wood in the direction of the grain. After approx. 15 minutes of working-in time dirt, any other material etc is removed with a hard brush and an absorptive, fluff free cloth and a lot of water. The process is continually repeated until the desired colour tone is achieved. Do not let the IRSA Wood Refresher dry on and on larger surface areas work in small sections. After it has dried thoroughly protect the now fresh-looking wood long-term by applying a coat of IRSA (Exotic) Wood Oil or IRSA Oil -Resin - Impregnator.

Consumption:

According to the degree of dirt, use 1liter for approx. 10-50 m² (for 1 m² between 20-100 ml).

Areas of application and application restrictions:

IRSA Wood-Refresher is used to clean and refresh wood in outdoor areas (decking, terraces, wood cladding etc.), which has gone grey after exposure to the sun and weather. Avoid it coming into contact with metals (e.g. metal fixtures and fittings) and plants (ornamental and useful plants should be covered with decorator's sheets for example); any rough or loose dirt as well as any heavy film coatings should be removed from the greying wood (e.g. strip the wood down). Possible algae or moss coatings (any green coating) should be removed first using IRSA Aqua Cleaner 5000 Outdoor.

Storage life/Application and transport temperatures :

Can be kept for several years if the storage room is dry and the container is well sealed.

IRSA Wood-Refresher should be stored and transported in a frost free, not too warm environment (from 5 to 35°C) and it should not be applied in temperatures below 8°C.

Contents:

IRSA Wood-Refresher contains oxalic acid, non-ionic tensides and water.

Safety advice

When using this special cleaner one needs to wear suitable protective clothing (splashes could bleach the material) as well as gloves and protection glasses. Avoid contact with the skin and mouth. Any splashes must be washed off immediately with a lot of water. Should you feel at all unwell you must consult a doctor and show him this information or the label on the product. Avoid contact with ornamental or useful plants. Do not let the product fall into the hands of children. Do not fill the product into any container intended for the use of food or drink. Keep the product away from food stuff, drinks and animal feed. The product can cause an allergic reaction.

It is not a hazardous material! If required the safety data sheet can be downloaded.

Disposal

The packaging must be completely empty before disposing at the re-cycling. Any residue product must be taken to the problem rubbish disposal section. ASN-Nr. 070699
